

Software application solutions designed to:

Provide Public Safety Services

TribVue™ is a fully integrated, tribal resource planning system by Tribal-D™ that complies with the latest standards in information assurance and data protection protocols.

The infrastructure on Indian reservations for supporting public safety and welfare is a critical element for Tribal governments to manage. Critical trending of data, along with GIS, associated with Police, Fire, Utilities, Transportation, and Postal delivery systems need to be monitored and maintained for Tribal executive decision making. TribVue™ apps provide integrated databases to help track information relevant to the delivery of these public services.

TribVue Module Apps That Help Provide Public Services are:

Tribal-D's **Tribal Resource Planning** (TRP) model enables the integration of applications and data that help Tribal governments manage vital program functions to have real time program execution data and outcomes for proactive decision-making.
